

Energy Policy Statement

Eurailscout Inspection & Analysis B.V. supplies measurement data to railway managers for monitoring the status of rail infrastructure on quality and safety. This enables our clients to anticipate maintenance and renewal in good time.

Eurailscout is a member of SKAO and has committed itself to the CO₂ emission reduction program of the national government and where this is a requirement of clients. One of Eurailscout's objectives is the continuous improvement of efficient energy use. Eurailscout wants to achieve this by:

- Setting up an energy management system;
- Mapping and updating the energy consumption within the company;
- Making use of alternative motor fuels and/or green electricity;
- The systematic assessment of energy use;
- The planning and execution of energy saving measures;
- Making available the required personnel, resources and organisation;
- The periodic assessment of the results of energy saving measures;
- The continuous updating of the planned activities for the improvement of energy efficiency;
- Working in accordance with rules and regulations.
- Both the own staff and that of third parties will be actively involved in this by means of information sessions and instructions.

The energy management system forms a part of Eurailscout's integral management system. The energy management system concerns all Eurailscout activities.

Based on the 2010 reference year, the board of directors has set an annual CO₂ reduction target of -2%. Eurailscout has realized a larger CO₂ reduction up to and including 2014 and is therefore on the right track towards 2030. As a result of this positive development, the board of directors decided in 2015 to tighten its annual target to reduce CO₂ emissions from -2% to -4%.

We are confident that everyone will make a maximum commitment from his or her own position to reduce energy consumption where possible.

Amersfoort,

Oscar van Soomeren
