

CO₂ Awareness Certificate Level 4 | Participant The Sustainable Supplier

In December 2022, Eurailscout Inspection & Analysis joined the platform The Sustainable Supplier. This is a platform for organizations that want to do business safely and responsibly and support companies, clients and suppliers with their challenges in the field of sustainability, the environment and safety.

How did it start?

In 2009, Movares, Strukton, Antea Group and Sweco set up a platform for organizations that want to invest in a sustainable and safe society. That is what Sustainable Supplier is known for today. In 2013 Sustainable Supplier enters into a partnership with Building Nederland and successfully integrates the CO₂ reduction in construction website, doubling the number of members. In 2107, the success formula of the Sustainable Supplier leads to a unique collaboration between 7 companies. The result of this collaboration is the integration of the D-tools foundation and all parties join the Sustainable Supplier as partners. The network continues to grow, witnessing the 3020 Participants in 2023.

Spearheads

The platform supports companies and clients in setting up their business operations and projects in a sustainable way. This involves acting in an environmentally responsible manner and developing innovative methods to reduce environmental impact. Sustainable purchasing and meeting the sustainable requirements of clients is the starting point. The Sustainable Supplier helps you find your sustainable suppliers.

Specialismen

De Duurzame Leverancier kent de volgende specialismen: duurzaamheid, sustainability, circulaire economie, circulaire inkoop, circulair inkopen, co-creatie, CO₂ reductie, CO₂-ladder, grondstoffen, duurzaamheidsscan, duurzaamheidsindex, kennisuitwisseling en circulaire economie bouw

Specialties

The Sustainable Supplier has the following specialisms: sustainability, sustainability, circular economy, circular procurement, circular procurement, co-creation, CO₂ reduction, CO₂ ladder, raw materials, sustainability scan, sustainability index, knowledge exchange and circular economy construction

Knowledge exchange

Members of The Sustainable Supplier actively disseminate their acquired knowledge and experiences. There are several contact moments every year for consultation about chosen solutions or to overcome obstacles. Non-governmental organizations (NGOs) are also invited. These organizations are independent of the government and in one way or another focus on a supposed social interest. In general, these are organizations that work to promote environmental protection, health, development work or human rights. Some NGOs that participate are: MVO Nederland, ProRail, Rijkswaterstaat, Zero-e and the Ministry of Infrastructure & Water Management. This exchange and coordination mainly takes place physically and/or via modern means of communication.

Eurailscout carries out independent measurements of the railway infrastructure with modern measuring and inspection trains as well as hand-held devices. Eurailscout works for infrastructure managers and rail contractors in various countries.

The measurement data from Eurailscout measurement and inspection trains support the asset management process. At the request of the infrastructure managers, the measurement data obtained for them are provided to the rail contractors for maintenance purposes. The aim for the infrastructure managers is a safe, reliable and available rail network. Eurailscout is aware of its responsibility to provide the necessary data as well as possible.
